PROFESSIONAL SUMMARY

Software Developer building production backend services and mobile features with Python, FastAPI, Node.js, and React Native. Currently develops REST APIs, security controls, and CI/CD workflows for a ride-sharing mobile application heading to Google Play. Also shipped a cross-platform offline AI desktop application (Rust, Tauri, local LLMs) for Windows, macOS, and Linux.

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL, C++
Backend: FastAPI, Node.js, Flask, SQLAlchemy, REST API Design, Authentication, Rate Limiting, Input Validation
Frontend & Mobile: React, React Native, HTML5, CSS3, Bootstrap, Vite
Databases: PostgreSQL, MySQL, MongoDB, SQLite
DevOps & Cloud: Docker, GitLab CI/CD, GitHub Actions, Google Cloud Console, Google Play Store Release
AI & Tools: Ollama, Local LLMs, Retrieval-Augmented Generation (RAG), Tesseract OCR, Tauri, Git, GitHub, GitLab
Practices: Object-Oriented Programming, RESTful Architecture, Database Design, Software Testing, Debugging, Code Review

PROFESSIONAL EXPERIENCE

Software Developer | Optimize Everything *October 2026 – Present*

- Build and maintain REST API endpoints in Python (FastAPI) and Node.js for a ride-sharing mobile application, backed by PostgreSQL.
- Developed route calculation APIs that power ride matching and trip planning for the mobile app.
- Implemented API safety controls including rate limiting, request validation, and authentication checks to protect services from abuse and malformed input.
- Built rider and operator contract endpoints that store user choices and pricing inputs, and extended operator data models with new cost fields.
- Implemented a terms-versioning and re-consent flow so riders must accept updated terms before continuing.
- Developed React Native features, including responsive layout shells, and added an automated copy audit to enforce consistent wording across the app.
- Wrote automated tests against task acceptance criteria and reviewed API code to improve quality and reliability.
- Containerized services with Docker and supported GitLab CI/CD pipelines and Google Cloud deployments.
- Prepared the Android release and Google Play Store deployment.

Technology & Digital Literacy Intern | Anmol Aashayein Trust *July 2024 – August 2024*

- Delivered 30+ hours of classroom instruction on computer fundamentals and digital skills to students from underserved communities.

PROJECTS

FacadeOC – Offline AI Desktop Application *January 2026 – April 2026*

Rust, Tauri, JavaScript, Vite, SQLite, Ollama, GitHub Actions

- Built and released a self-contained desktop AI application for Windows, macOS, and Linux that runs entirely on-device with no cloud API dependency.
- Integrated Ollama as a managed sidecar process for private local language model inference.
- Developed a Vite and JavaScript interface with real-time token streaming, prompt management, and persistent conversations.
- Designed SQLite storage for chat history, character profiles, and application state.
- Automated cross-platform builds, releases, and application updates with GitHub Actions CI/CD.

SocialConnect – Social Networking Web Application *December 2025 – February 2026*

Python, Flask, SQLAlchemy, PostgreSQL, SQLite, Jinja2, Bootstrap

- Built a Flask social networking app with user profiles and full CRUD for posts using modular backend routes.
- Implemented registration, login, logout, password hashing, and session-based authentication.
- Designed relational models with SQLAlchemy ORM and supported both SQLite and PostgreSQL configurations.
- Deployed a live version with responsive Jinja2 and Bootstrap interfaces.

EDUCATION

Bachelor of Computer Applications (BCA) | Lovely Professional University, Punjab, India | CGPA: 7.07 *Aug 2024 – Expected 2027*

CERTIFICATIONS

- Python Essentials 1, Cisco Networking Academy (Sep 2026) | Research Methodology, NPTEL (Sep 2025)
- Machine Learning, Great Learning (Sep 2024) | Hackathon Participation, AIESEC
